

Release Notes. Revit Families xS-Series V 1.3

4/2026

Page: 1 / 4

Description of content

This collection represents the d&b Revit families for the xS-Series and is based on Revit version 2018. The families are created as Communication Device families. The project d&b audiotechnik Revit Families xS-Series.rvt contains all components of the xS-Series, i.e. TOPs, SUBs and accessories. Where applicable, accessories are integrated as nested families in the loudspeaker and subwoofer families and can be scheduled accordingly. d&b audiotechnik Materials and textures for visualization are already set in the families' Properties. The d&b always black Material is used for parts of the components which you cannot order in a different color.

Intended use

The Revit families in this library are intended to be used for accurate technical visualizations of d&b products and provide accurate data of mounting points for which third-party mounting accessories are permitted. We have omitted proprietary mounting points and simplified constructional details that are not relevant to the purpose of these files for product liability and IP reasons. Should you require a customized mounting solution that uses these proprietary mounting points, please contact your d&b representative to initiate the appropriate design process through our mechanical engineering department.

Detail Levels

The d&b audiotechnik families support the Detail Levels Coarse, Medium and Fine.
