Stadia and Arena with d&b around the world.

A welcome announcement, sponsor's message, or in-game update on the score - intelligible speech is prerequisite for clear, precise, and authoritative communication, whenever venue operators need to captivate the crowd and elevate the atmosphere.

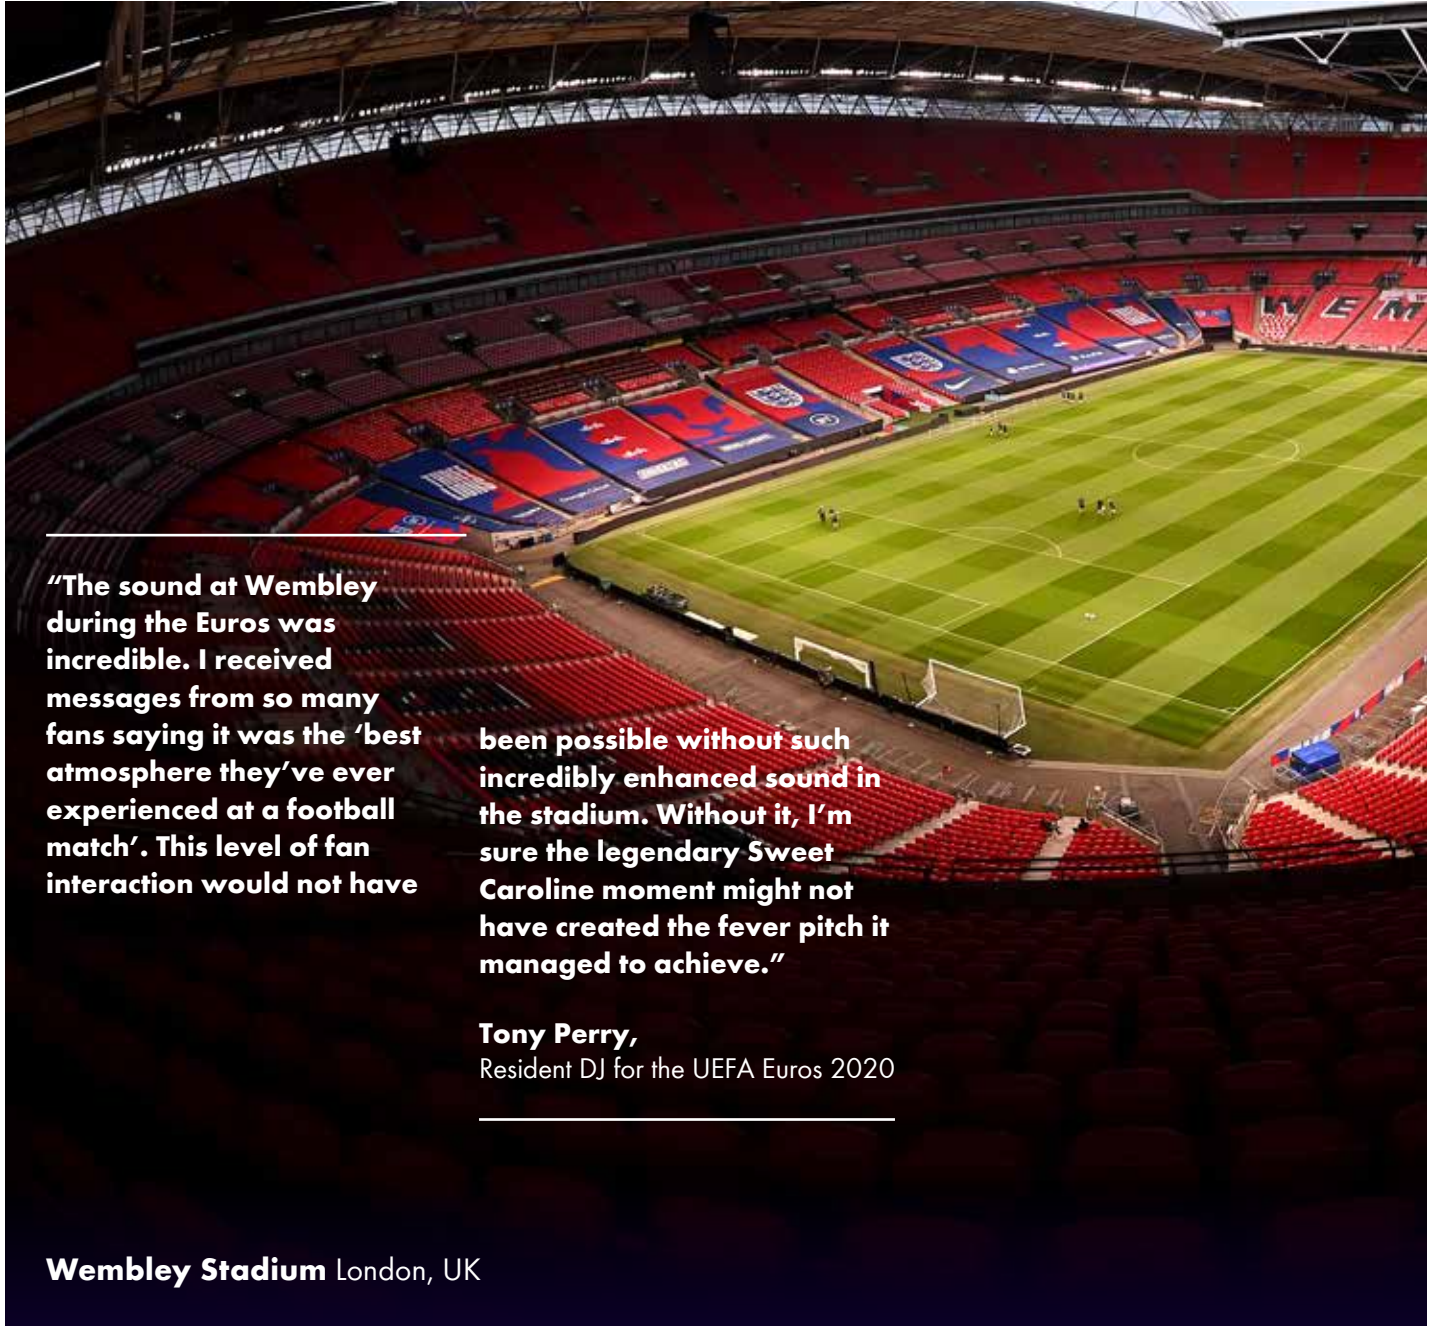

The importance of production quality audio is recognized as experience-enhancing, for athletes, artists and their fans.

Feeling the musicality of the pre-event playlist or a team's individual walk-on anthem builds anticipation, emotional connection, and ultimately drives performance.

Our unique technologies enable venue operators to ensure lower sound levels for broadcast and media zones and happy family areas, and

a consistent sonic performance no matter the game-day set up or audience capacity. Safe in the knowledge that our international reputation for concert sound - and supporting infrastructure for incoming productions - is unquestioned.

d&b audiotechnik is synonymous with quality and ease of use. Our sound systems accurately and effortlessly transfer passions from performer to audience, inspire celebrations and deliver winning results. Season long.

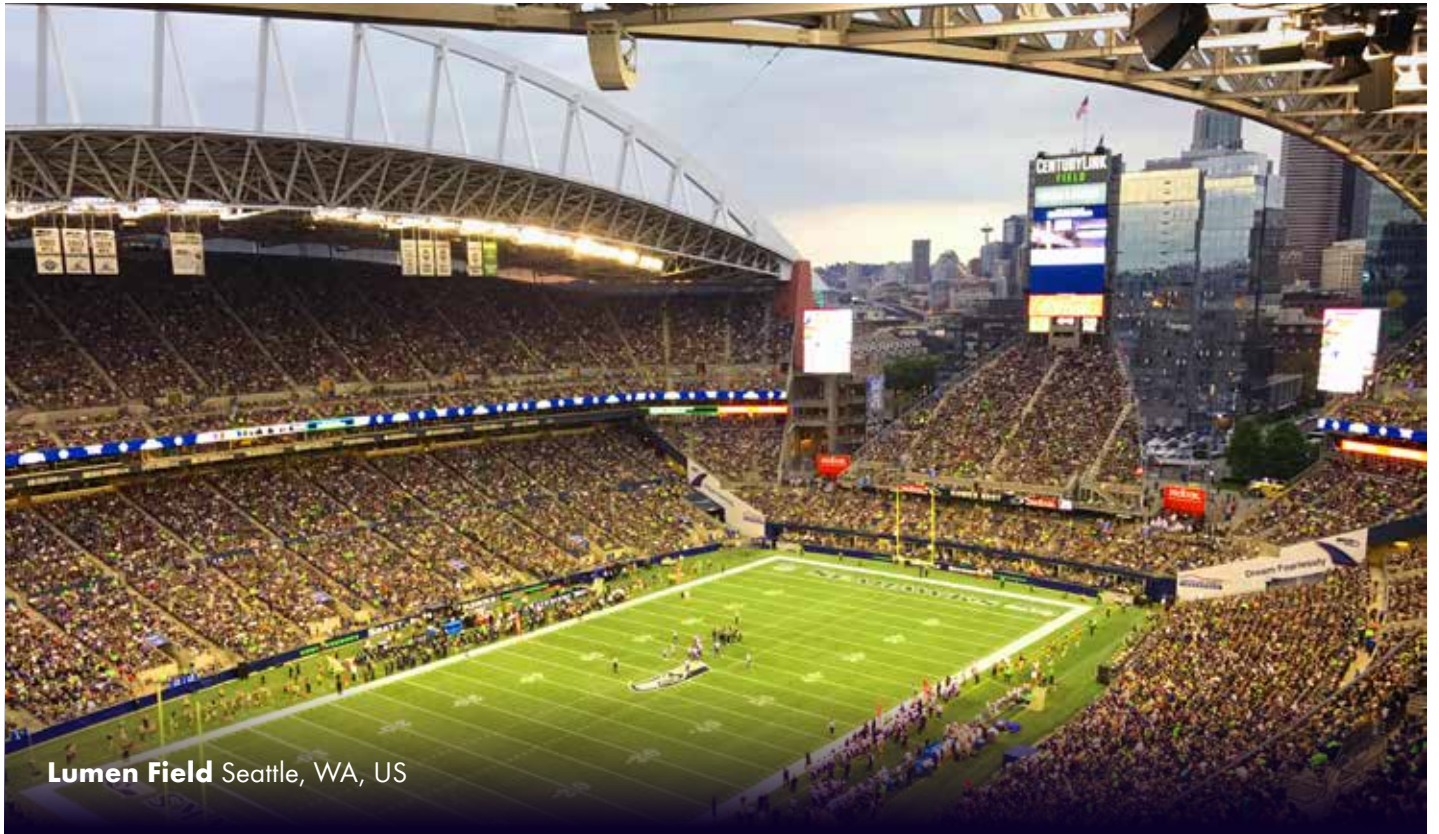

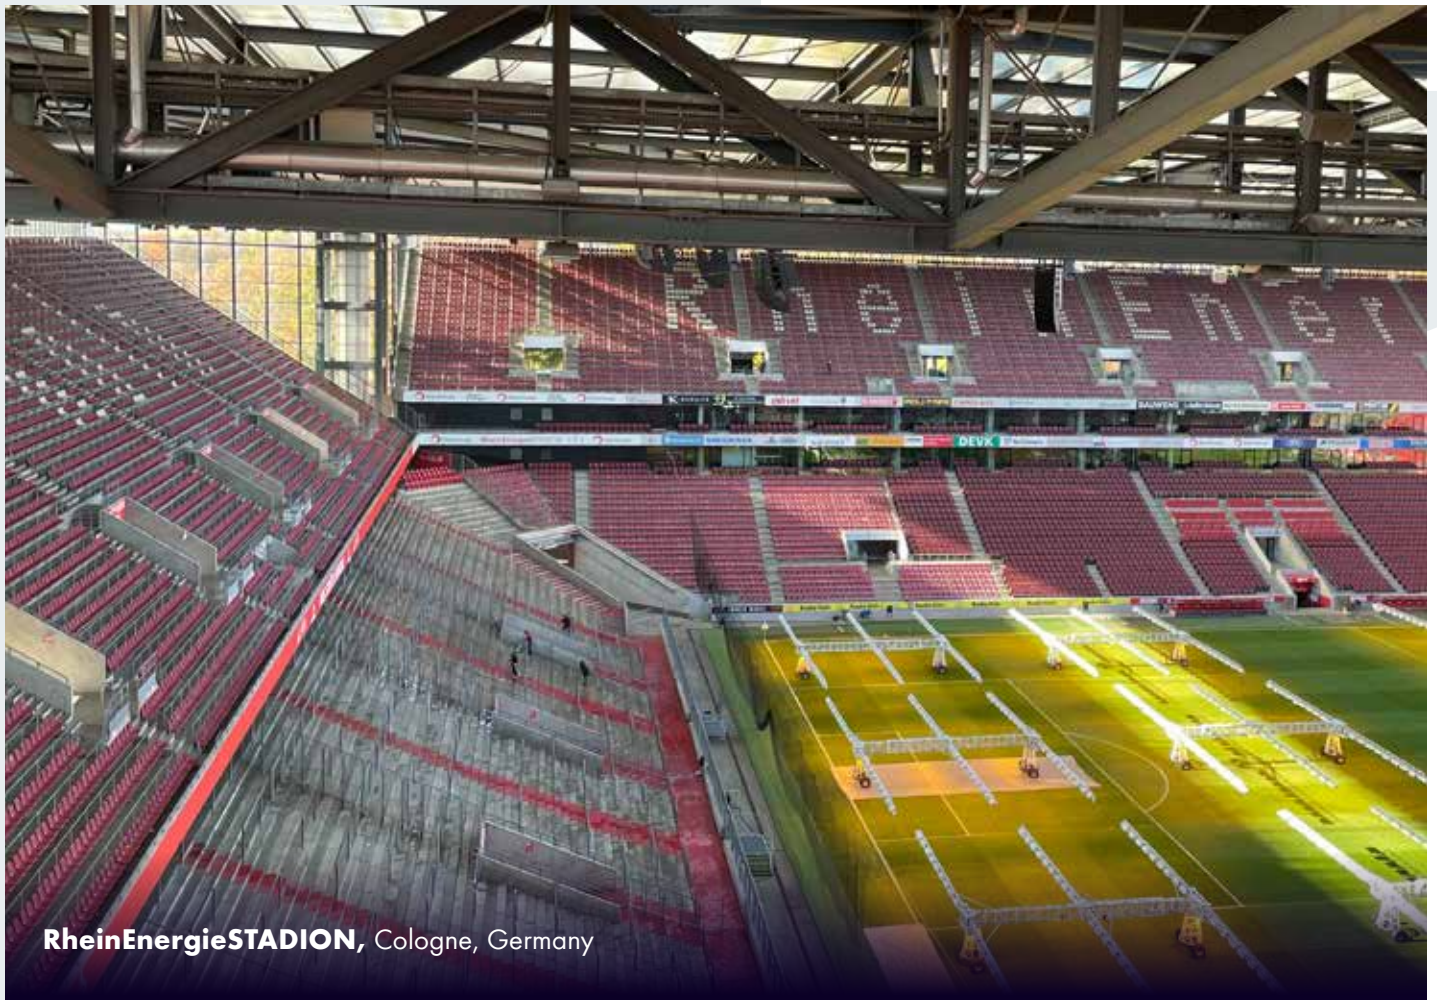

"The sound at Wembley during the Euros was incredible. I received messages from so many fans saying it was the 'best atmosphere they've ever experienced at a football match'. This level of fan interaction would not have

been possible without such incredibly enhanced sound in the stadium. Without it, I'm sure the legendary Sweet Caroline moment might not have created the fever pitch it managed to achieve."

Tony Perry,
Resident DJ for the UEFA Euros 2020

Wembley Stadium London, UK

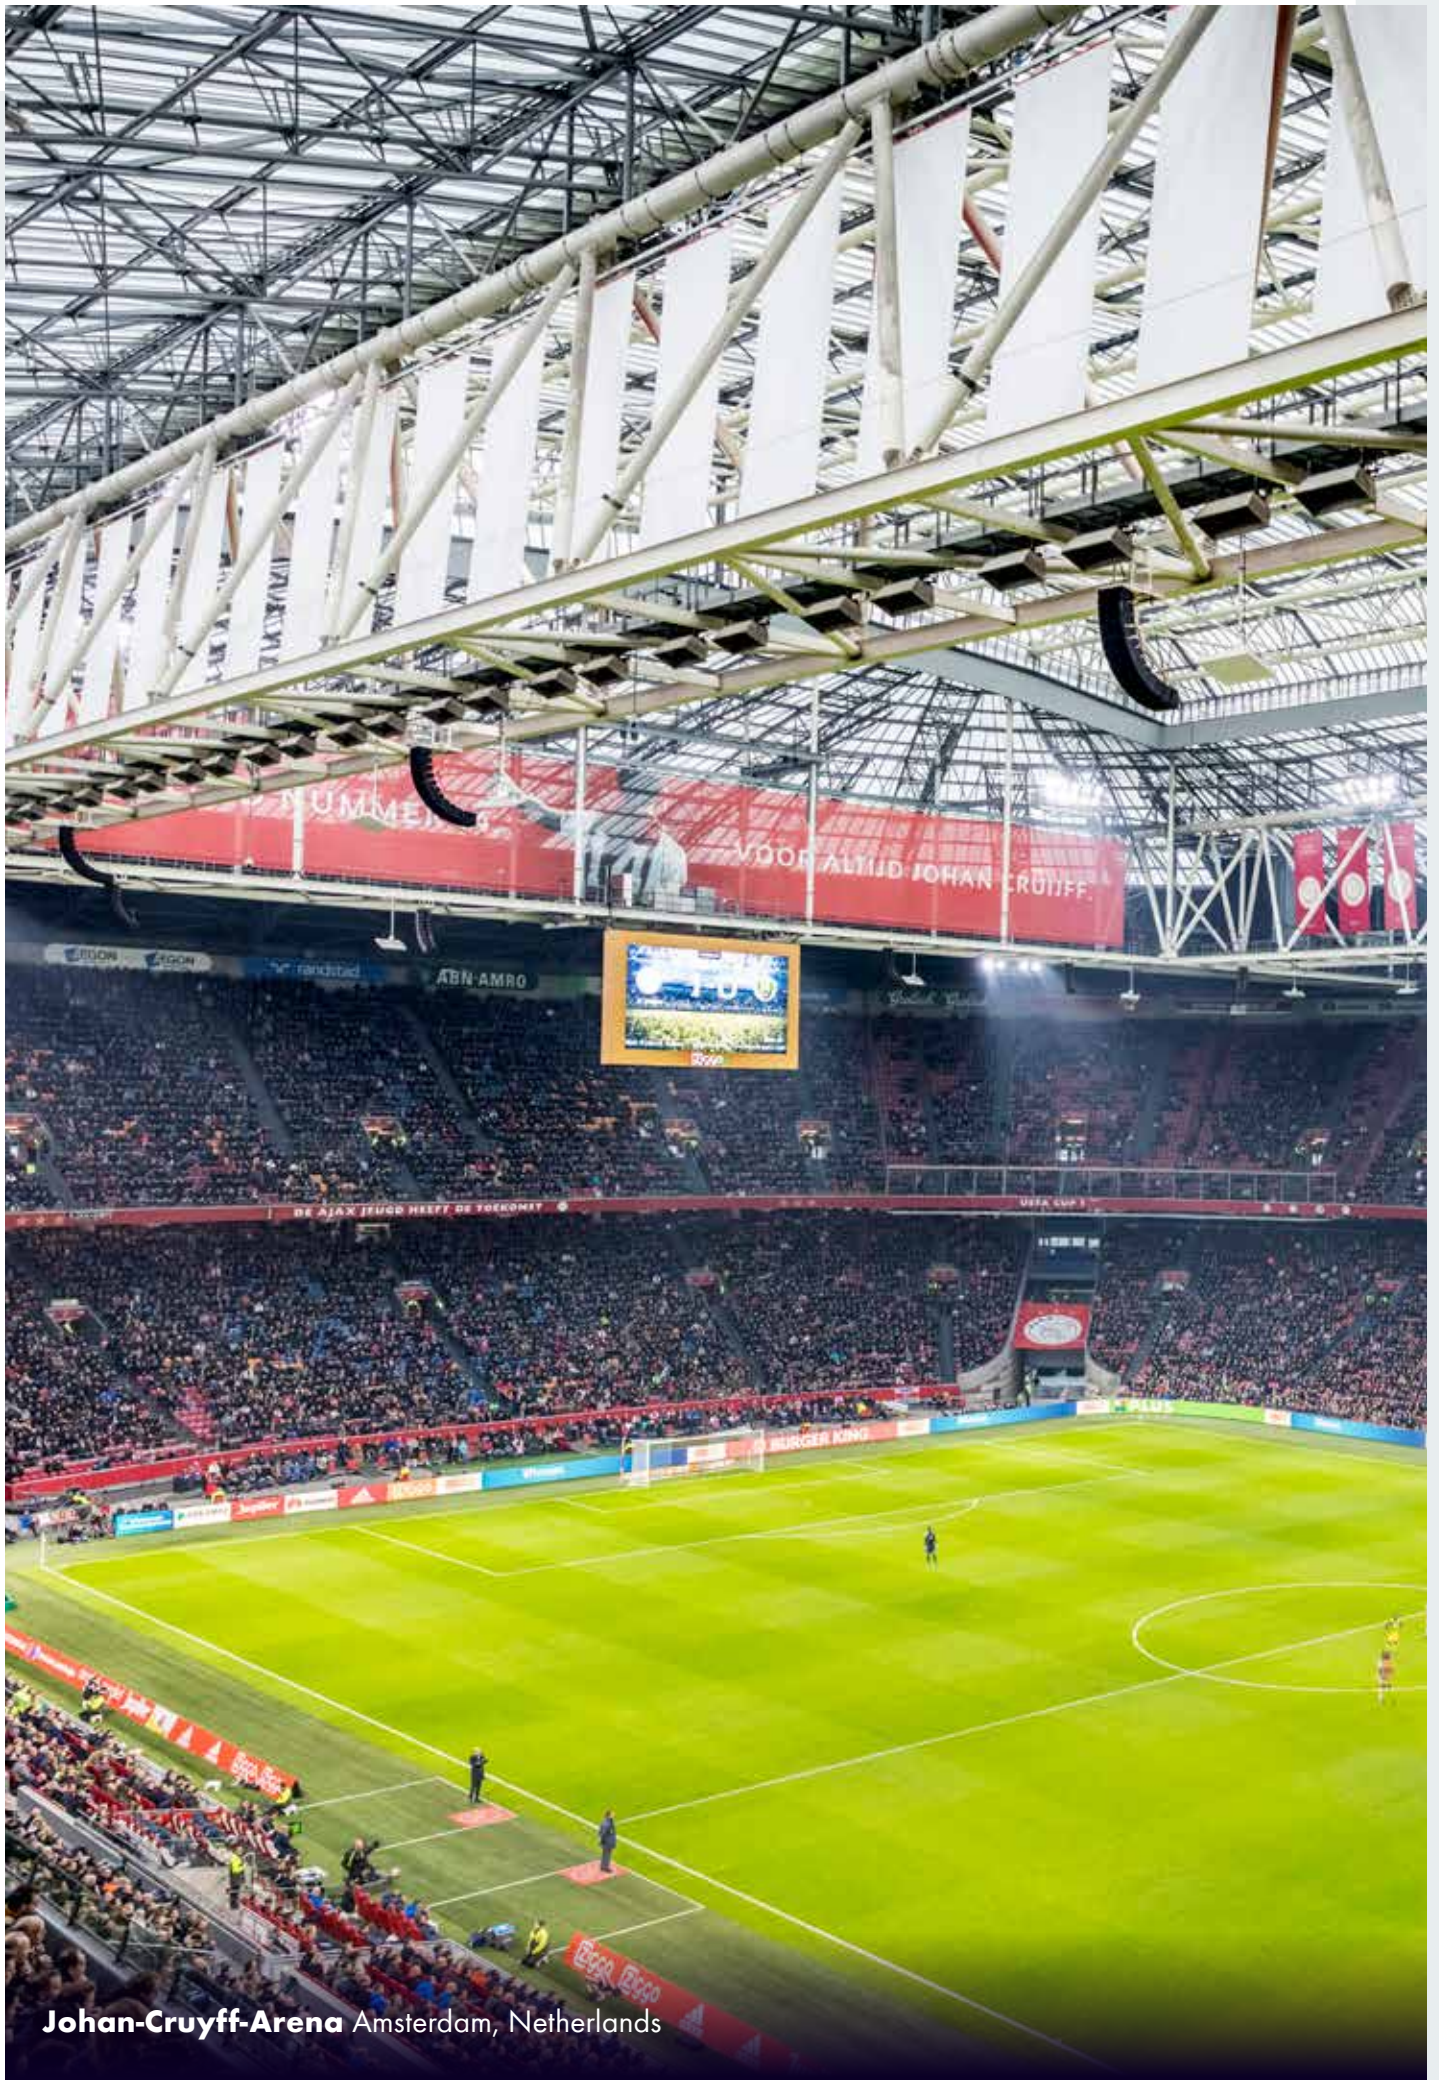

RheinEnergieSTADION, Cologne, Germany

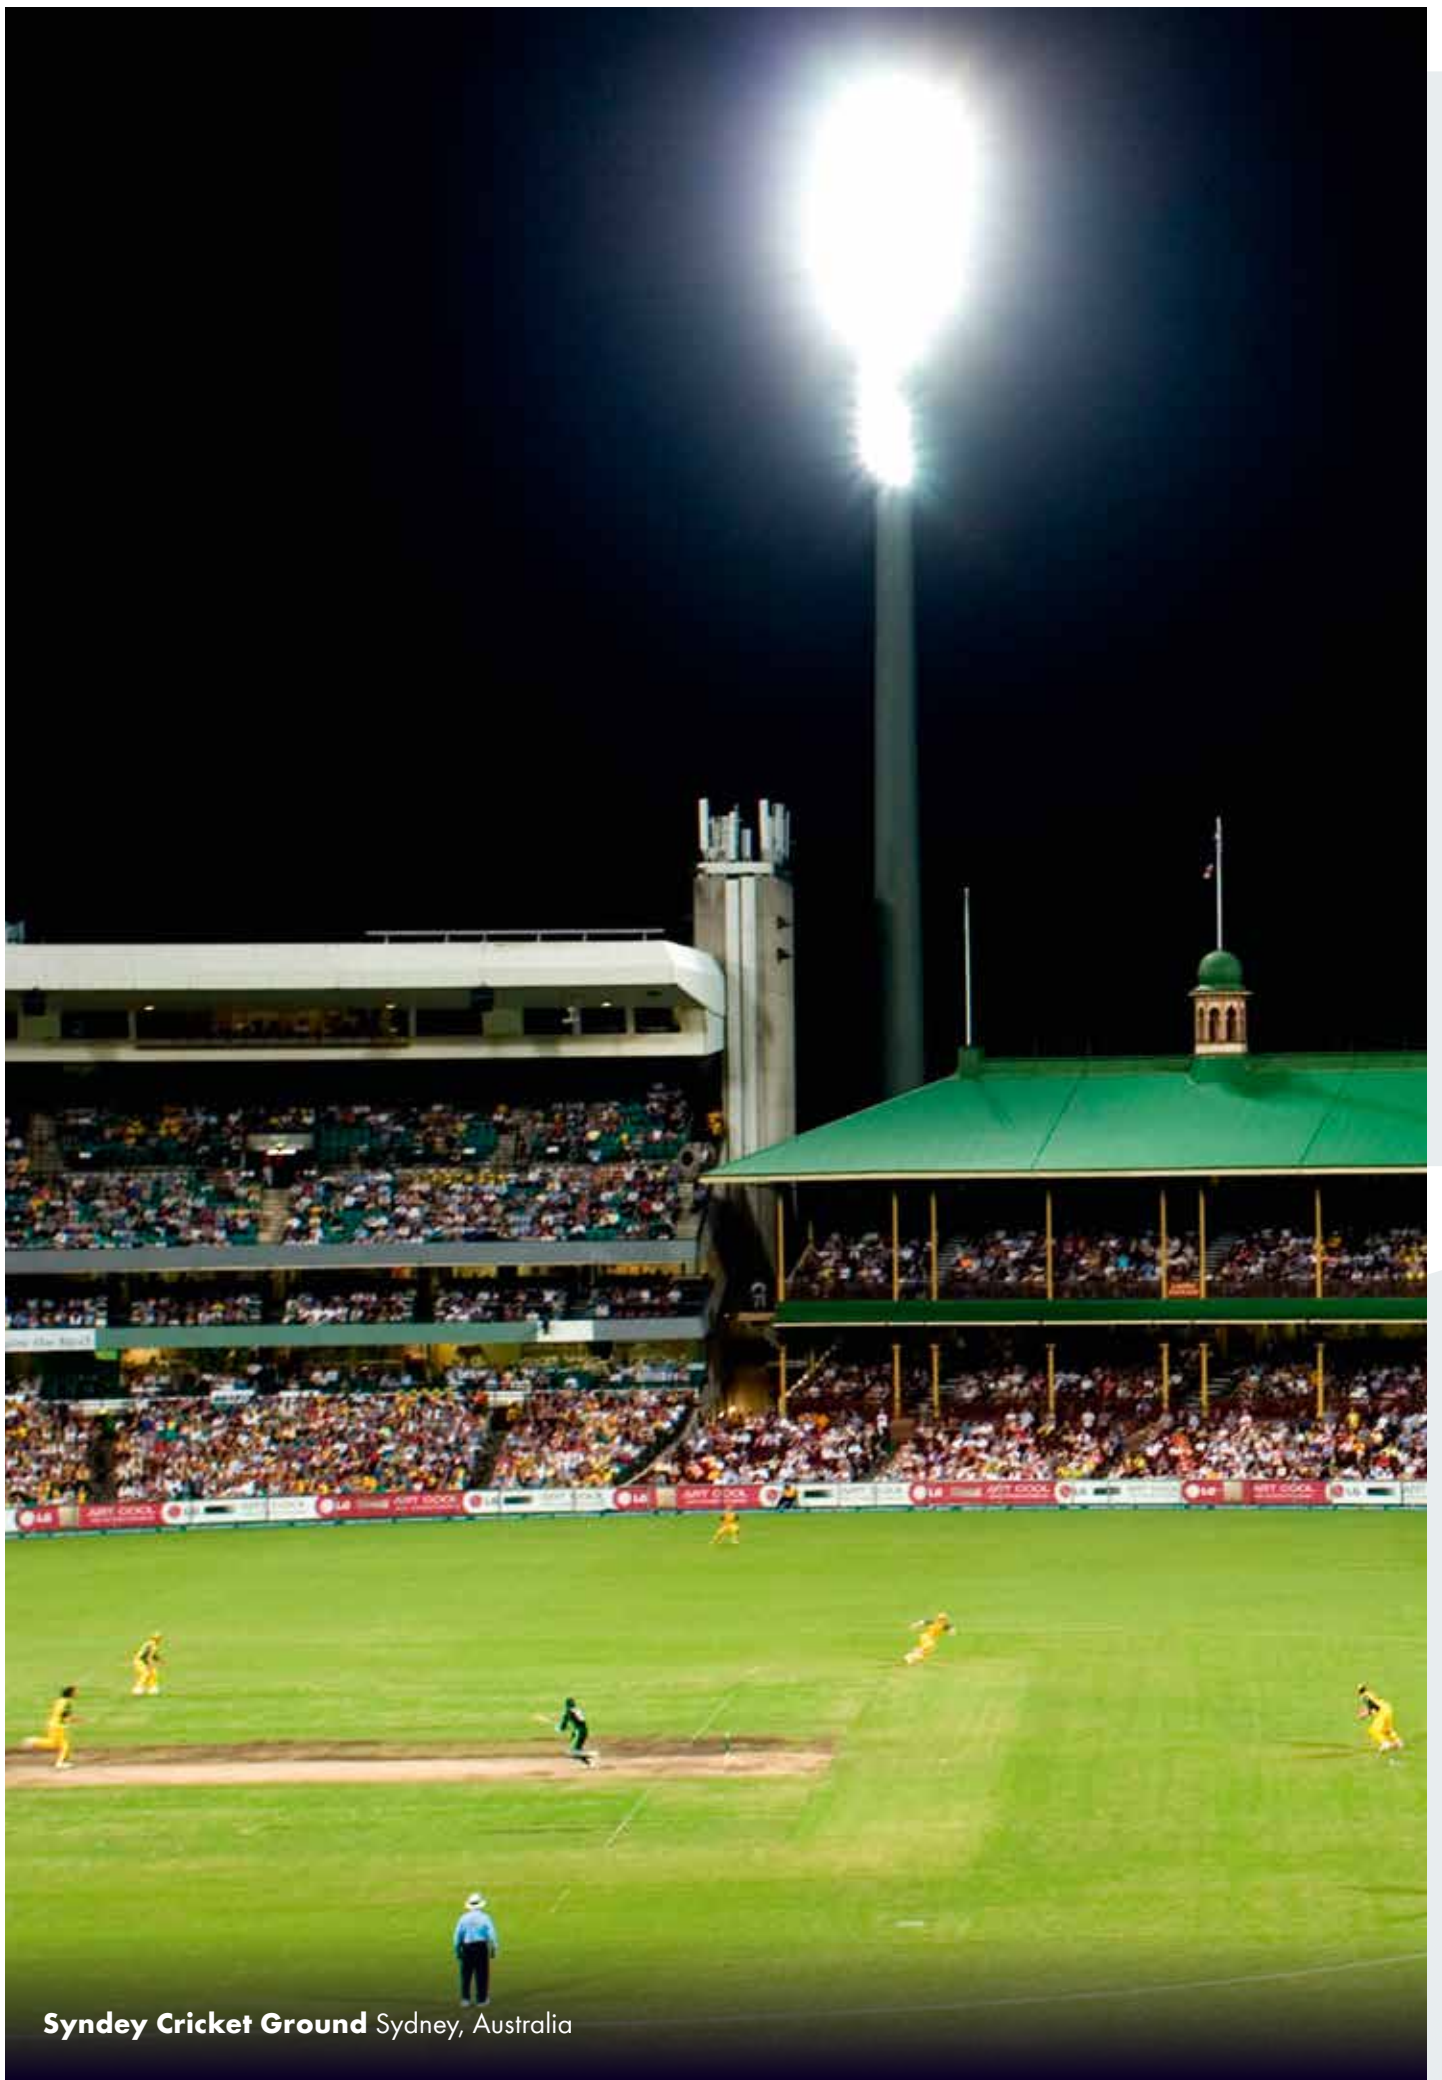

Europa-Park Stadion Freiburg, Germany

“During the planning stage, we considered exactly what would be heard from the sound system outside the stadium. The technology from d&b audiotechnik gives us very precise directivity control, with very little sound radiating to the outside. The d&b A-Series loudspeakers have exceptionally controlled dispersion right down to the lower frequencies, which I consider to be a great advantage – in fact, this was an important reason for choosing d&b!”

Gerd Gruss, fein media,
